## Q1. What is CUDA?

**Answer:** CUDA (Compute Unified Device Architecture) is a parallel computing platform and programming model developed by NVIDIA that enables developers to run portions of their programs on a GPU instead of a CPU to achieve faster performance.

---

## Q2. Where its used ?

**Answer:** CUDA is used in GPU programming, vector processors, matrix operations, and AI/ML workloads. It is applied in various fields such as astronomy, biology, physics, artificial intelligence, finance, data mining, medical imaging, and manufacturing.
